Ⅲ [1] Aの座標を $(a, \frac{a^2}{2})$,

Bの座標を $(b, \frac{b^2}{2})$

$(a \neq b)$ とおくと,

$$\vec{OA} \cdot \vec{OB} = ab + \frac{a^2 b^2}{4}$$

$$= \frac{1}{4}(ab+2)^2 - 1$$

よって、 t のとり得る値の範囲は $t \geq -1$ (答)

[2] [1]より $t = \frac{1}{4}(ab+2)^2 - 1$ で、 t が

最小値 -1 をとるのは $ab = -2$ のとき.

$b = -\frac{2}{a}$ より ($ab = -2$ より $a \neq 0$ なので)

$A(a, \frac{a^2}{2}), B(-\frac{2}{a}, \frac{2}{a^2})$

$\triangle OAB$ の面積は

$$\triangle OAB = \frac{1}{2} \left| a \cdot \frac{2}{a^2} - \frac{a^2}{2} \left(-\frac{2}{a}\right) \right|$$

$$= \frac{1}{2} \left| \frac{2}{a} + a \right|$$

$$= \frac{1}{2} \left(\left| \frac{2}{a} \right| + |a| \right)$$

$$\geq \frac{1}{2} \cdot 2 \sqrt{\left| \frac{2}{a} \right| \cdot |a|} = \sqrt{2}$$

($\because$ 相加・相乗平均の関係より)

よって、 $\triangle OAB \geq \sqrt{2}$ (答)

$$\text{III } \tau \quad MH \quad \rightarrow \quad 2MH \sin \theta \quad \rightarrow \quad MH \sin \theta \quad \rightarrow \quad 2\pi \sqrt{\frac{mL}{MH}} \quad \rightarrow \quad \sqrt{2}$$

$$h = -\frac{1}{\sqrt{3}} \quad A \quad 3 \quad B \quad 2$$
