次の英文を読み、下の問い合わせに答えなさい。

Bees have been used by humans since the beginning of civilization. Besides their production of honey, they play an important role in the world food supply. Bees fly from flower to flower carrying pollen with their legs to pollinate over 90 kinds of fruit and vegetable crops eaten by humans. In fact, the first bee colonies in the United States were used for apple pollination. [ 6A ] However, bees in the United States have now been vanishing in large numbers due to a phenomenon called *Colony Collapse Disorder*, or *CCD*. If this continues, North American agriculture, as well as world farming, will be devastated in the future.

Bee colonies affected by *CCD* can appear healthy, but then the adult bees suddenly disappear, leaving behind only honey, pollen, immature bees, a queen, and maybe a few worker bees. Although there has been a lot in the media about *CCD* lately, some people feel that *CCD* is nothing new. A few bee experts have said *CCD* is actually an older disorder known as *Disappearing Disease*. Furthermore, there is very little agreement on the causes of *CCD*. Among the possible causes are Varroa mites<sup>\*1</sup> and other insect diseases, malnutrition,<sup>\*2</sup> certain chemicals, environmental changes, or some combination of these factors. [ 6B ] The fact that two or more causes might be working together makes *CCD* more difficult to understand.

Beekeepers around the world have reported high bee losses since 2006. [ 6C ] In fact, billions of bees have disappeared since then. These bee losses should be taken seriously because honey bees contribute billions of dollars to the world's agricultural industry. One <sup>(A)</sup> estimate suggests that one-third of the world's food production is directly dependent on honey bee pollination. For instance, California produces 80 percent of the world's almond supply. An acre<sup>\*3</sup> of almond trees produces only 18kg of almonds without honeybees but up to 1,100kg when bees are used. The loss of bees could create a price war for food because of decreasing food availability.

Although the *CCD* Working Group, based at Pennsylvania State University, has been leading the research into this phenomenon, more scientists, beekeepers, industry workers, and government officials are beginning to investigate the possible causes of *CCD*. [ 6D ] In addition, many other research agencies have realized the importance of honey bees and have begun to distribute research funds in an attempt to find the cause and a cure. [ 2 )

At present, some bee-breeding areas of the United States have already lost 50 to 70 percent of their colonies because of *CCD*, and the problem may still get worse. Clearly, without appropriate action, the future of North America's bee industry, as well as world farming, is at great risk.

次の英文はある外国人の目から見た日本に関する記事です。下線部(1)と(2)を日本語に訳しなさい。

Visitors who are afraid that there's nothing traditional left in Japan need only venture beyond the outskirts of Tokyo.

(1) There, modernity is known, but it hasn't made much of an impact on the farmers and others who live among the ancient shrines and castles that dot the countryside. These people look to religion as a practical extension of daily life and turn to it whenever necessary, performing simple rituals designed to ask the *kami* spirits for fertility and abundant crops. Tradition and progress are not seen as opposing forces in Japan, and city people often take time out from their focus on the (2) 21st century to reconsider their ancestors' traditions at many picturesque and joyful festivals.
